Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 24.343; Variance 25.165; scale 1.967

J. ELABORITHM.

1. ELABORITHM.

1. FUNCTION: DYNEIN HAS AFRASE ACTIVITY. CYTOPLASMIC CYNEIN ACTS AS MOTOR FOR THE INTRACELLULAR METRICHADE MYTLLITY DE VESTULES AND ROGARELLES ALONG MICROTOBULES.

1. SUBJUIT: CONSISTS OF AT LEAST TWO HEAVY CHAINS AND A NUMBER OF INTERMEDIATE AND LIGHT CHAINS.

1. SUBGELLULAR LOCATIONS: CYTOPLASMIC.

1. SUBGELLULAR LOCATIONS: CYTOPLASMIC.

1. SIMILARITY: BELONGS TO THE LYNEIN HEAVY CHAIN FAMILY.

No bacteria-derived MPH-57 protein -
used esp. in diagnosis of tuberculosis.
Claim 7: Fig. 2: 10pp. agamese.
Large quantities of MF-57 protein can be derived from a cultured transformant and used in diagnosis of tuberculosis by ELISA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Orease: immunogen: vaccino: diagnostic: heat shock protein: HSP:

proteins of Streptococcus albus
Disclosure: Fig 5: 50pp. French
The sequence is that of the Groes protein which is encoded by the
structural gene groes. See also 92477-922486.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  24-NCV-1994.

The sequence of the Heilcobacter pylori heat shock protein H (given in R6733) was compared to that of other GroES-like proteins from Legionella pneumophila (R67387), Escherichia coli (R67386), Clostridium perfringens (R67389), Mycobacterium leptangensian thempophilic bacterium (R67388), and regions of homology were identified.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Leftar
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     R67390.

Claim 8: Page 349-349-2054pp. English.

This sequence represents a Helicobacter pylori GHPD protein of the movention. The polypeptides can be used for preventing or treating Helicobacter infections, and usertangular diseases associated with these infections, including acute, chronic, and atrophic gastritis, and peptic ulcer diseases. e.g. dastric and duodenal licers. They can also be used for the production of antibodies. The products can also be used for detection and diagnosis.
                                                                                                                                                                                                                                                                                               31.MAR.1999 (first entry)
H. Cylori GHPO 1543 protein.

DNA from Helicobacter pylori and Helicobacter fells - used to develop prods, for detection, treatment and prevention of Helicobacter infection.

Disclosure, Fig. 74(-ii.) 168pp; English.

The sequence of the Helicobacter pylori heat snock protein B (qiven in R67387) was compared to that of other Griss-like proteins from Legionella pneumophila (R67387), Escretchia coli (R67387), clostridium perfringens (R67389), Mycobacterium leprae (R67385) and thermophilic bacterium (R67388), and regions of homology were identified.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    42-JUN-1995 (first entry)

                                                                                                                                                                                                                                                                                                                  Disclosure, Fig. 6: 168pp. English.

Vaccine compositions include the A and B subunits (given in Rt7-1;)

Of H. Felis urease encoded by the ureA/ureB gene (U75319) region

of the uruse gene cluster of pillics (CNCM i-1355), as well as the

mast shock proteins HSPA (R6534), and HSPB (R67313) encoded by the

urease-associated HSP gene cluster rejonn (Q7531) of pillics9 (CNCM

i-1356). Recombinant products are expressed in Escherichia coli.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Immunogenic composition against Heirottarter interlib. Biso quee fragment(s) and protein(s) from Heirottarter interlib. Biso cluster and heat shock proteins(s). From Heirottarter and heat shock proteins. Biso component of a novel immunogenic composition capable of inducing protective antibodies against Helicobacter Infection. The composition may include the HspB protein (R74339), a urease UreA or UreB protein (R74336, R74337) or the Urei protein (R7436). The composition is used to prepare a vaccine for humans or animals, especially against H. Felis. Antibodies against the proteins may be used for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      treating Helicobacter infection, and primers/probes to the DNA sequence may be used for detec ion of Helicobacter infection. - for PGX probes in Studying HEP receptors

This sequence represents a novel human Eph family-like receptor type tyrosine kinase-like protein. The encoding DNA may be used as PGX probes in studying HEP receptors. The proteins show dominant negative (vaxiant being dominant) or signal modification and/or amplification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     vaccines to protect humans or other animals (esp. dats and dogs) against Helloobacter infection, or for treatment of such infections. The Coterminal tragment (see also W06728) of HspA is a preferred
                                                                                                                                                                                                                                                                                                                                              Helicobacter for treatment and prevention of esp. H pylori infection, also new antibodies specific for these antigens. Example 3. Page 110, 184pp. English of the specific for these antigens. Heat shock proteins HapA (W06731) and HapB (W06732) are products of a Helicobacter pylori gene cluster (see also t45681) in plasmid pille89 (CMCM 1-1356). Recombinant HapA and HapB can be produced in transformed host cells for use (esp. HapA) with Helicobacter urease subscribe (see also W06739-30) in novel immunogenic compans. These compans, can provoke a mucosal response and are useful as

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    N-PSDB: V33697.

New isolated thymus receptor tyrosine kinase - is used to develup roducts for the diagnosis and profileration diseases involving aberrant cell profileration cancers and other diseases involving aberrant cell profileration.

This is the amino acid sequence of 1 of 2 (see also W76526) putative novel human thymus receptor tyrosine kinases (TSTKs) as deduced from the nucleotide sequence of a CDNA clone (see V3667) obtained from a human foetal cell coll collaboration for the novel laws a deduced moi will not a 139.3 kMa. The novel laws share sequence howing with collaboration and a financial for the fight family of kTKs and collaborations are thus rembers if the Eph family of kTKs and collaboration such as endered the financially involved to diseases resulting in alterations in corration of involved in haematopoietic development. The involved to be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TRIK polymericates and polypeptides (including the mature protein, soluble polypeptides, the extracellular, transmembrane and intracellular domains, and epitope-bearing portions of such polypeptides), vectors, host cells and recombinant methods of producing these. Also provided are diagnostic methods for defecting disease states associated with the aberrant expression of TRIK and therapeutic methods for treating such disease states, especially cancer. IRIK is believed to be involved in a number of disease
                                                                                                       Sars
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 states such as cancers, e.g. testicular carcinoma, pancreatic carcinoma, colon carcinoma, lung adenocarcinoma, mammary carcinoma

New isolated luram genes and the secreted polyperlude(s) they encode useful for diagnosis and treatment of e.g. canners, neurological disolates. Inflammation or blood disorders and secrete beliable to the page 582-583; 721pp; English.

This sequence represents a socreted human protein encoded by the nucleic sequence represents a socreted human protein encoded by the nucleic molecule designated done 72 from the human convoluting to the gene of miman immunoglobulin For portion (e.g. v59602) for increasing the stability of the fused protein as compared to the human protein only. The lavention relates to 186 novel genes and their fragments (nucleic actual for preventing, treating or ameliotating medical conditions of the useful for preventing, treating or mambloogical conditions can be diagnosed by determining the amount of the new polypoptides in a sample of the uses are described for each of the 188 polynucleotides. Based on which tissues they are most highly expressed in (see V5511 for described)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Bednarik DP, Brower LA, Carter KC, Duan R, Ebner R, Endress GA, Feng P, Forric AM, Fischer CL, Fiorence KA, Greene JM, Hu JS, Kyaw H, Laffent DM, Li Y, Moore FA, Ni J, Olson HS, Rosen CA, Ruben SM, Shi Y, Soppet DR, Young PE, Yu GL, Zenu Z, WPI; 98-506354/41

S. Disclosure; Fig 5: 51pp: Engli. b.

The sequence was deduced from the first of two CKFs tound in cloud pGPS7, prepd. from C. psitta : genomic ENA and contg. the Hyp GPS7, prepd. from C. psitta : genomic ENA and contg. the Hyp openion. It is the hypA prover, or expross. 12 KD; analogous to the GroEs heat shock provein o. E. coil. The recombinant protein can be used to to raise antiho. es and in the preparation of vacchnes for the treatment o: ...umydial infertions.
